Received and published: 25 September 2019

Thank you for the review.

(1) We will add a paragraph in the introduction to highlight the new requirements in CMIP6 referred to in the 2nd paragraph of the review: the need for web and programmable interfaces, the ability to tailor the request, and the number and range of participating MIPs.

(2) We can add a paragraph on version control in section 5 (and rename this section to "Interfaces and Version Control of the Data Request").

(3) We will make the technical corrections listed.

Regards, Martin Juckes
