Received and published: 18 July 2019

Dear David Ham,

thank you very much for your comment to our manuscript.

A similar concern about availability of data was already raised by the manuscript editor.

We think that availability of all the configuration files and postprocessing routines that you mentioned is really important for reproducibility purposes. For this reason, we will be more than happy to make publicly available on Zenodo all these data at the moment of the submission of the final version of the paper.

C1

At the same time, we will provide information about COSMO-CLM and on the fact that it is free for academic purposes, in the final version of the manuscript.

Thank you again for your important comment.

On behalf of the all authors, Emmanuele Russo
