There are two additional things to my first review.

First one, minor. There are contour lines in the figure 3, but what are they? I suppose they are surface elevation field. Anyway please explicitly describe them. I am sorry not to point out this in the first report. I just realized this now.

Second one, also minor. I prepare two more patches in order to preserve symmetries. I confirmed symmetries of basal temperature field in X-axis Y-axis and diagonals at least for experiment F which was executed on my PC (compilation is by gfortran). Attached is a series of patches from revision ed94c608516e2c46c7985ea98eea94fcae47b37d8, which includes all the patches I previously posted, so you can discard the previous one.
SAITO Fuyuki.
