25 **Figure S1. Time series of regionally and monthly aggregated ozone concentrations at different altitudes (850, 650 and 350 hPa), sampled at ozone sonde locations, against ozone sonde observations (black).**

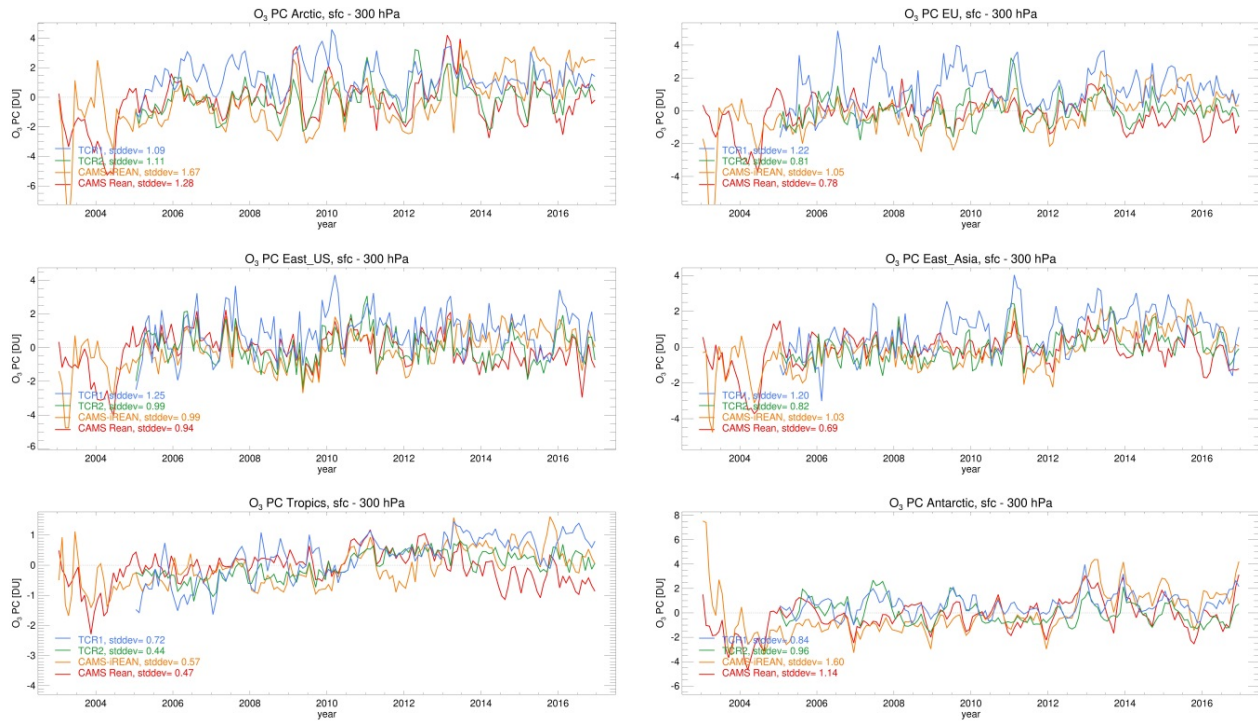

30

35 **Figure S2:** Multi-annual (2005-2012) mean surface ozone from TOAR for three regions, (top figures), along with corresponding relative mean bias for the reanalyses CAMS-iREAN, CAMS-REAN, TCR1 and TCR2, respectively.

40 **Figure S3:** Time series of regional, monthly mean surface ozone against TOAR observations. The dashed line indicates the number of TOAR $2^\circ \times 2^\circ$ grid boxes contributing to the statistics (see also right axis). Also the temporal correlation for the 2005-2014 time series is given in the figure legends.

50 **Figure S4: Anomalies in monthly mean O_3 partial columns (surface to 300 hPa) in four reanalyses, averaged for six regions: Arctic (>60°N), Eastern US (90°W – 70°W; 30°N - 43°N), Europe (10°W-30°E; 35°N-60°N), East Asia (108°E-160°E, 20°N-50°N), Tropics (30°S-30°N) and Antarctic (>60°S). Standard deviations for monthly mean anomalies are given, computed for the 2005-2016 time period.**
