Dear executive editor,

Thanks for your comment. With regard to the first point, we omitted the version number on purpose to avoid confusion from the reader. Indeed, the software version number is 2.0, while this is the first article about the model and it is meant to be the reference paper. We were afraid people would be looking for an article for version 1. Furthermore, we saw several other recent articles in GMD without version number in the title. However, if we have to, we will add it to the title.

About the 'Code availability' section, there is one before the Acknowledgements. There is also a version number and a DOI generated by Zenodo, but in the references (Hor-

ton, 2018a): Horton, P.: AtmoSwing v2.0.0, https://doi.org/10.5281/zenodo.1491744, 2018a. We can move this information from the references to the Code availability section for more clarity.

Best regards,

Pascal Horton
