Thanks for this. Would I need to make the modifications and then submit a new version of the paper for this ongoing discussion?

Is it okay if I do the following:

(1) Amend the title as per your suggestion. (2) Put all data that is used in the figures in a table in an additional appendix section, and explain how it was plotted, and also explain in detail how it was extracted from the model. (in short - the variables were extracted from the JULES model using extra code-lines in the model, into a csv file,

Discussion paper

which was then imported and plotted in Excel, so if I explain this more precisely). (3) in the same appendix section, I will put all the data that I extracted from other papers for comparison, and explain how I extracted it (I used 'datathief' software to read the data from their graphs, just to get their curves).

Thanks again,

Richard Coppel
