Thank you for the time spent reviewing the manuscript and your constructive suggestions for improvement. Many of your remarks echo the suggestions of Rev 1 and I find merit in both, particularly in regards to contextualizing my approach relative to previous efforts and adding to the discussion of methodological details. I also find value in expanding the discussion of why ENSO patterns are considered as it helps underscore an important point regarding the motivations for the analysis - the assessment of the coupled behavior of models. Also thank you for feedback on some of the minor details in the manuscript. I believe I will be able to fully address the comments made in a

C1

revision.
