

Interactive comment on “Atmospheric aging of small-scale wood combustion emissions (model MECHA 1.0) – is it possible to distinguish causal effects from non-causal associations?” by Ville Leinonen et al.

Ville Leinonen et al.

ville.j.leinonen@uef.fi

Received and published: 20 May 2020

We thank the executive editor for the comment. As all of the data were not ready for publication in Eurochamp database where it will be stored, we promised the handling topical editor to send the data and codes to him to share with the reviewers, if they would require them. We misunderstood the core principle 2 of guidelines.

The codes and data will now be available in Zenodo, the link will be provided in separate short comment.
