Dear authors,

as executive Editor of GMD, I am writing this comment to make you aware of a misinterpretation of our "best practice" rules as you name it. In your code availability section you write "If this paper is accepted by GMD, we will follow journal best practice guidelines and archive the version and example data as published in one of the recommended open source repositories". This is not exactly to the point, as we require the authors to archive the data **before** the discussion phase. Therefore please write as soon as possible a comment stating the archive place of your code.

C1

Best regards,

Astrid Kerkweg
