Received and published: 15 December 2020

We thank the reviewer for his/her careful reading and encouraging comments on our manuscript (ms). We are currently working on the atmospheric forecast evaluation and to identify the factors responsible for the SST forecast drift. We tried our best to address the comments by the other two reviewers.

Interactive comment on Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2020-326>, 2020.
