Dear Editor,

Thank you for the comments and minor revisions. We apologize for accidentally removing the code and data availability section, it was an oversight in editing and responding to the reviewers.

We have updated the code and data availability section to the following statement:

The current version of the Pyrcel model is available from the project website: pyrcel.readthedocs.io under the New BSD (3-clause) license. The exact version of the Pyrcel model used to produce the results used in this paper along with the analysis code and model output is archived on Zenodo: http://doi.org/10.5281/zenodo.4319145.

Thank you,
Sam Silva
