Supplementary Material

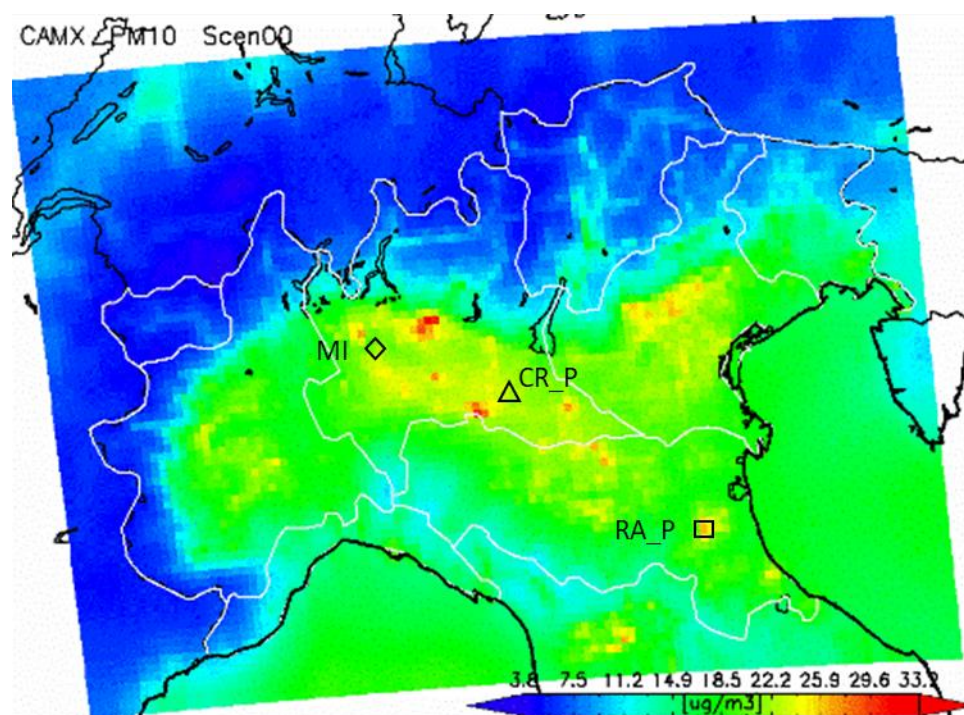

Figure S1. PM₁₀ yearly mean concentrations for 2010 obtained with CAMx. The empty markers indicate the sites for which a detailed analysis of interaction terms and gas ratio was carried out.

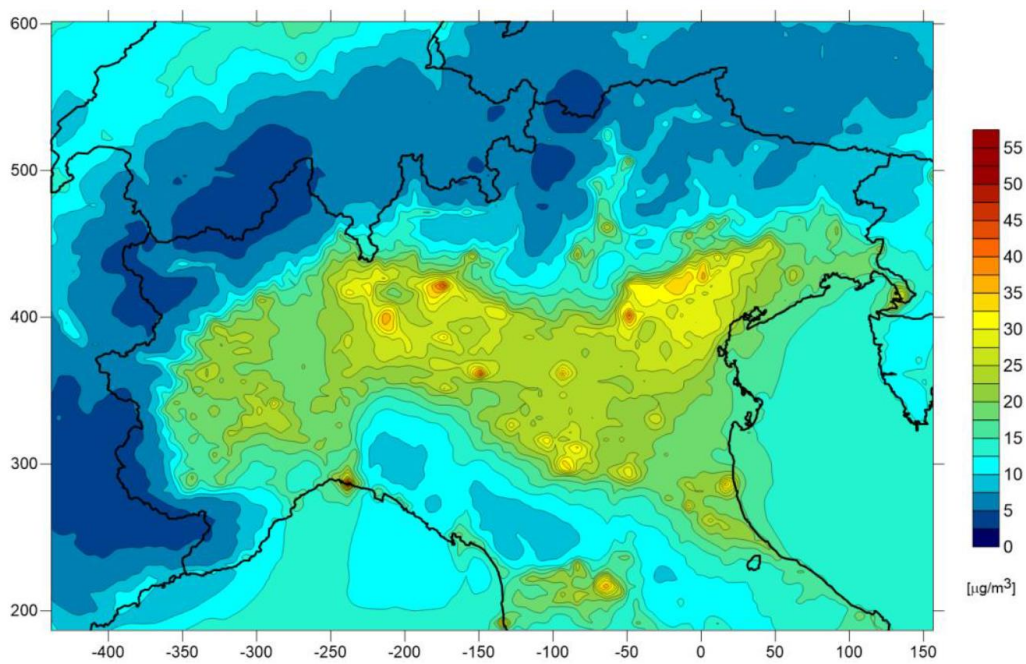

Figure S2. PM_{10} yearly mean concentrations for 2010 obtained with FARM

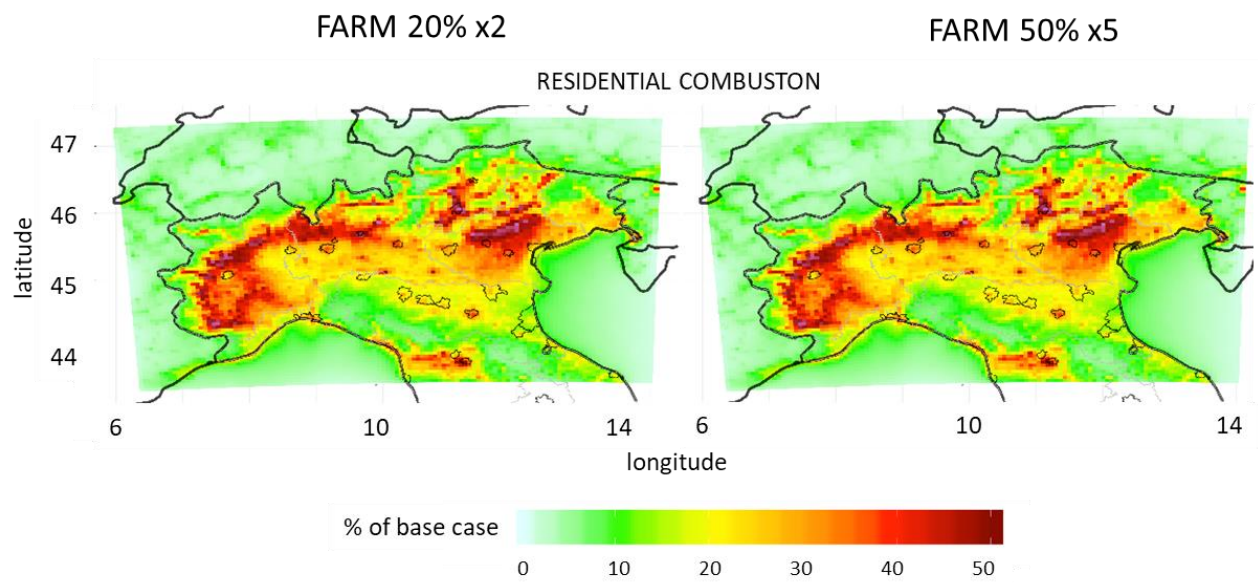

Figure S3. Annual average impacts of RES expressed as proportion of the base case for 20% and 50% ERLs.

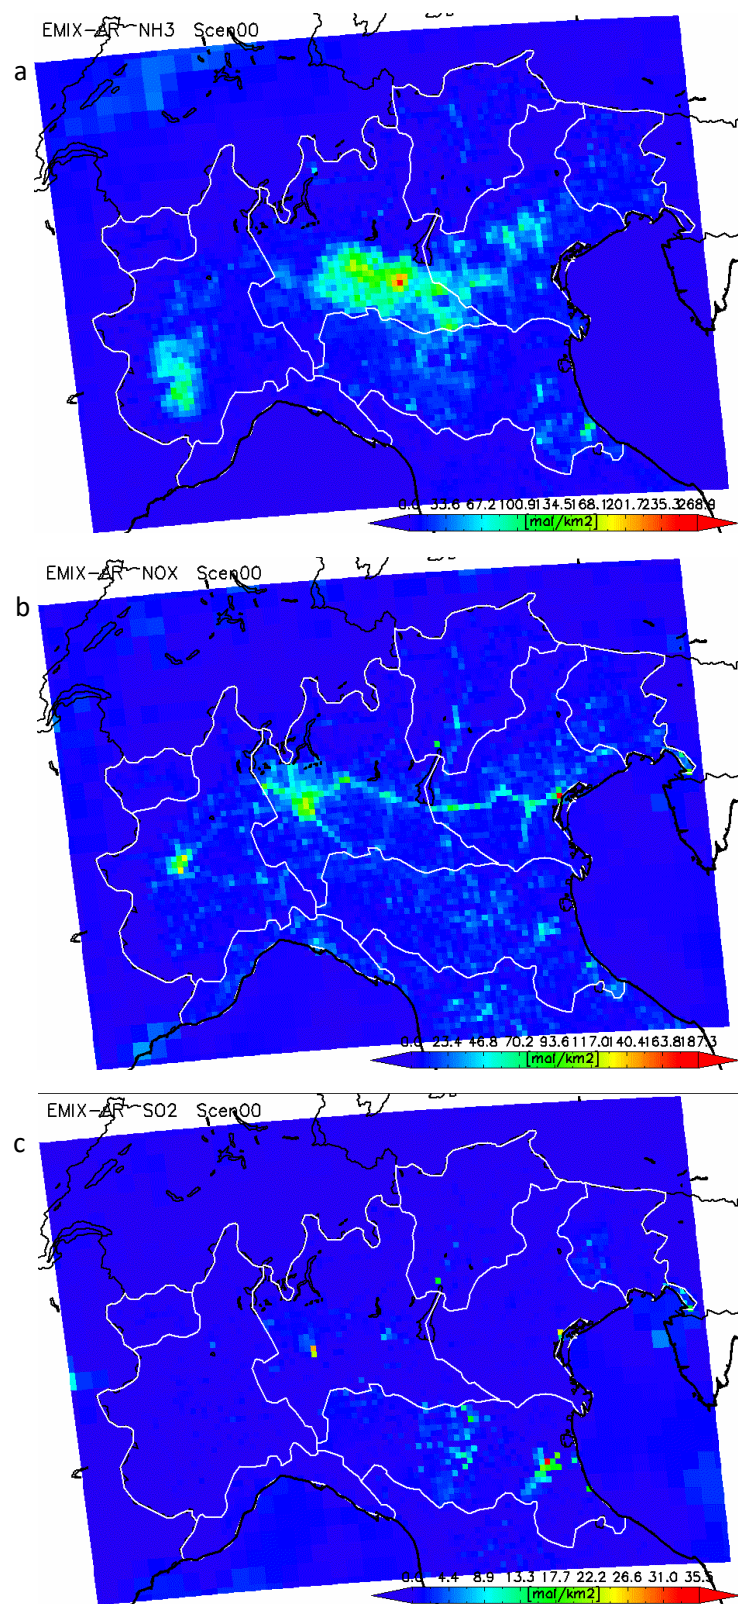

Figure S4. Emissions of NH_3 (a), NO_x (b) and SO_2 (c) in the studied domain in 2010.

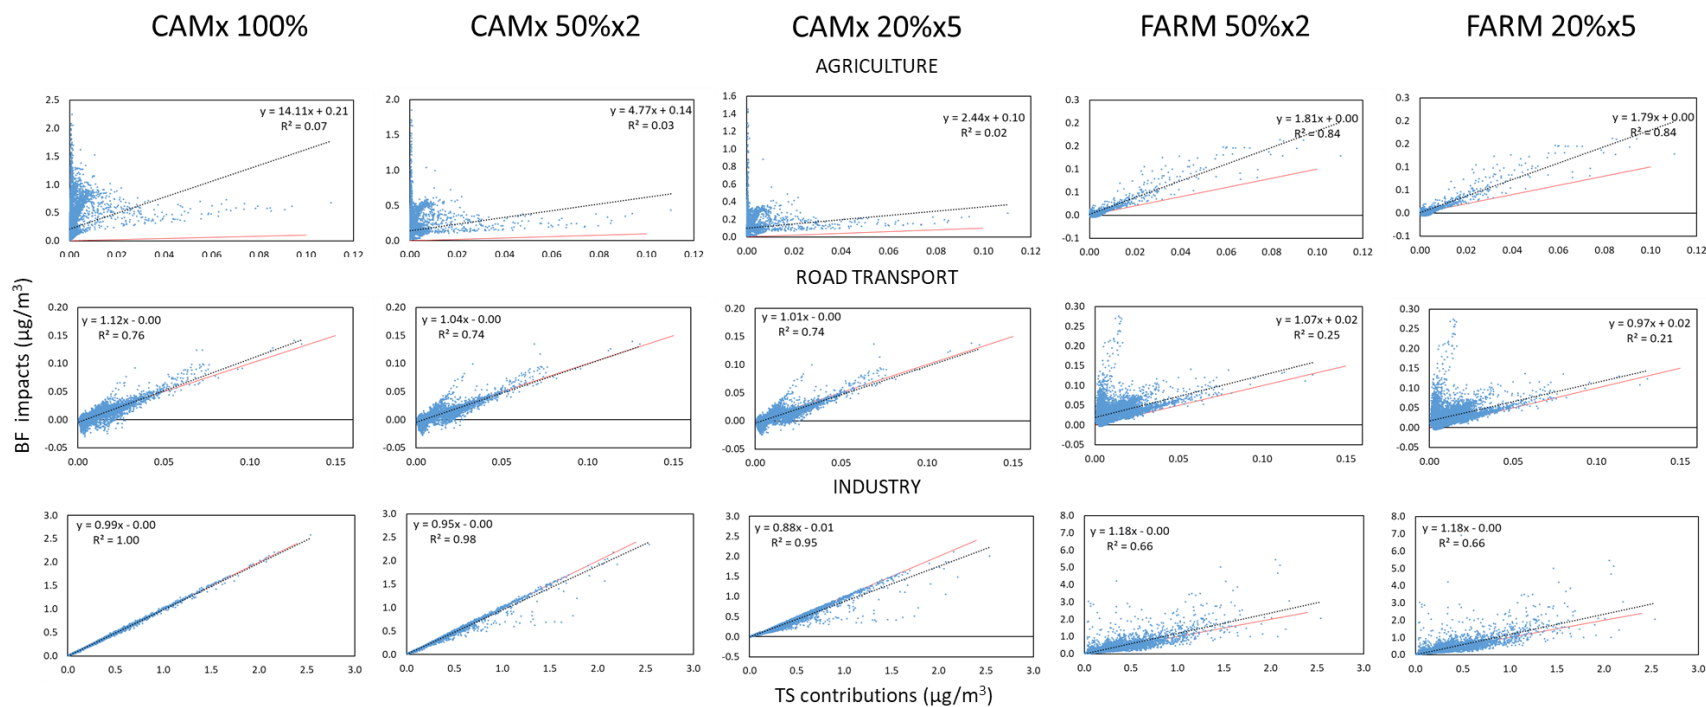

Figure S5. Scatter plots of the BF impacts (CAMx and FARM) on particulate sulfate versus the TS contributions (PSAT) for 20%, 50% and 100% ERLs. Agriculture (AGR), industry (IND) and traffic (TRA).

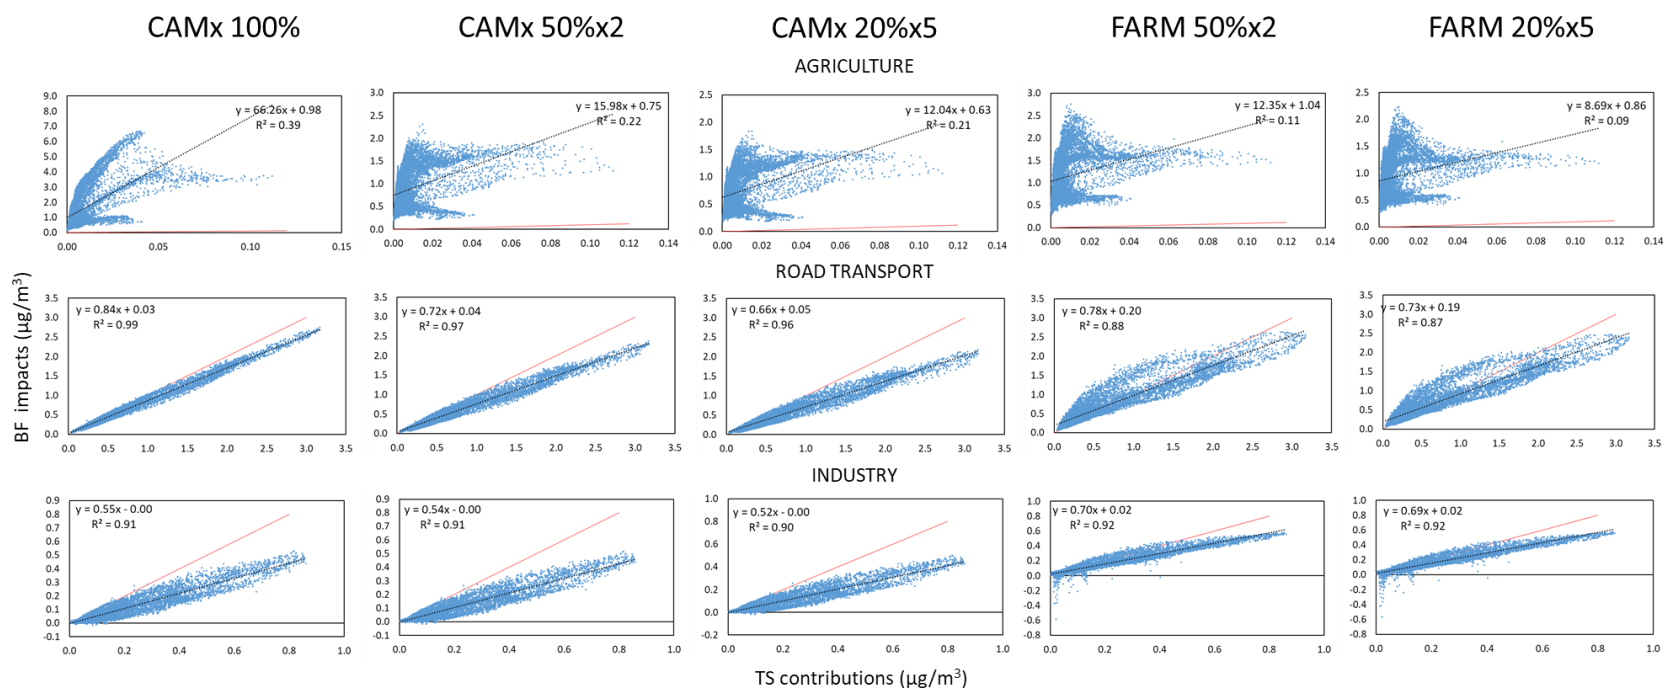

Figure S6. Scatter plots of the BF impacts (CAMx and FARM) on particulate nitrate versus the TS contributions (PSAT) for 20%, 50% and 100% ERLs. Agriculture (AGR), industry (IND) and traffic (TRA).

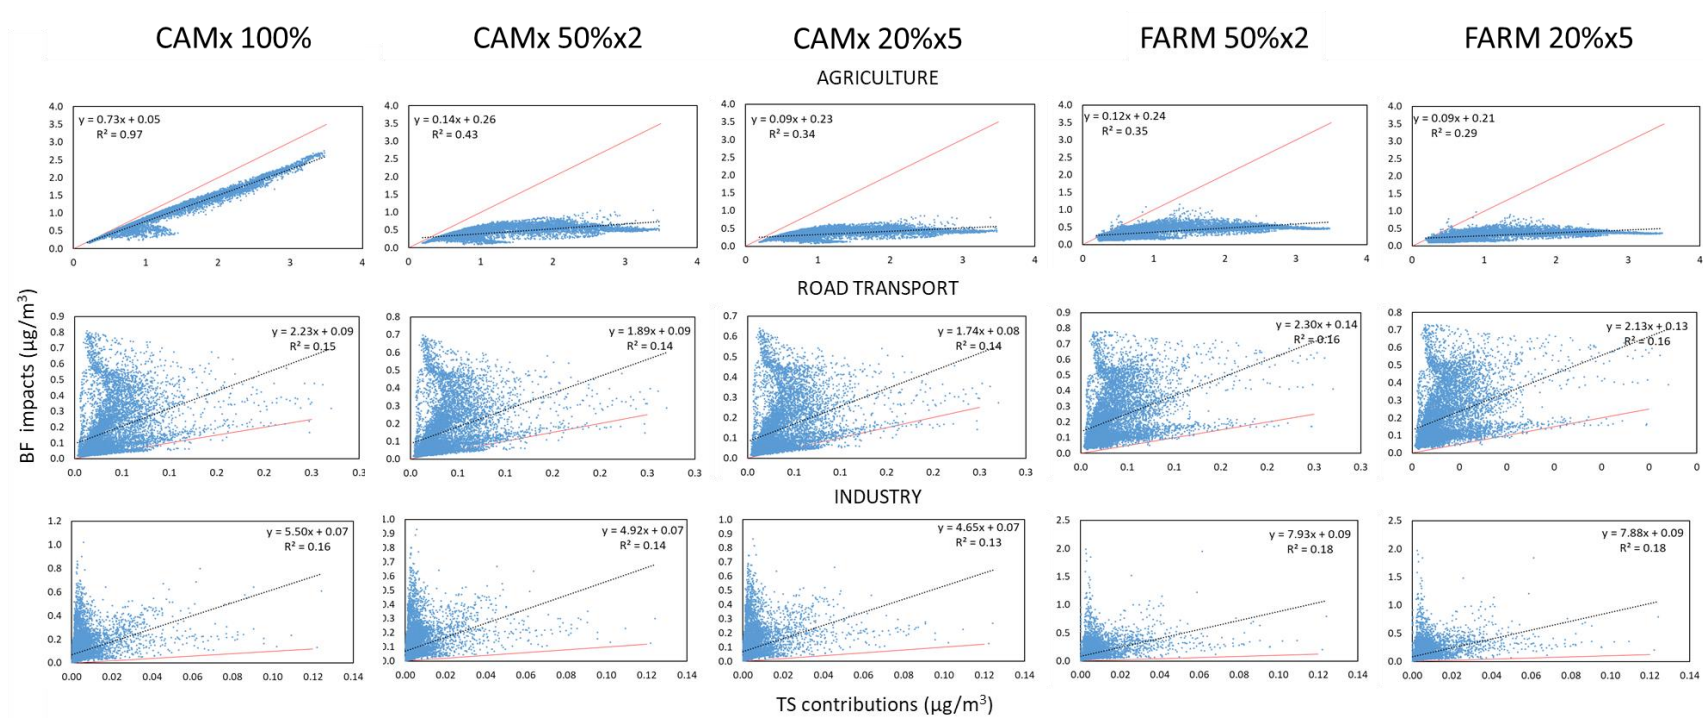

Figure S7. Scatter plots of the BF impacts (CAMx and FARM) on particulate ammonium versus the TS contributions (PSAT) for 20%, 50% and 100% ERLs. Agriculture (AGR), industry (IND) and traffic (TRA).

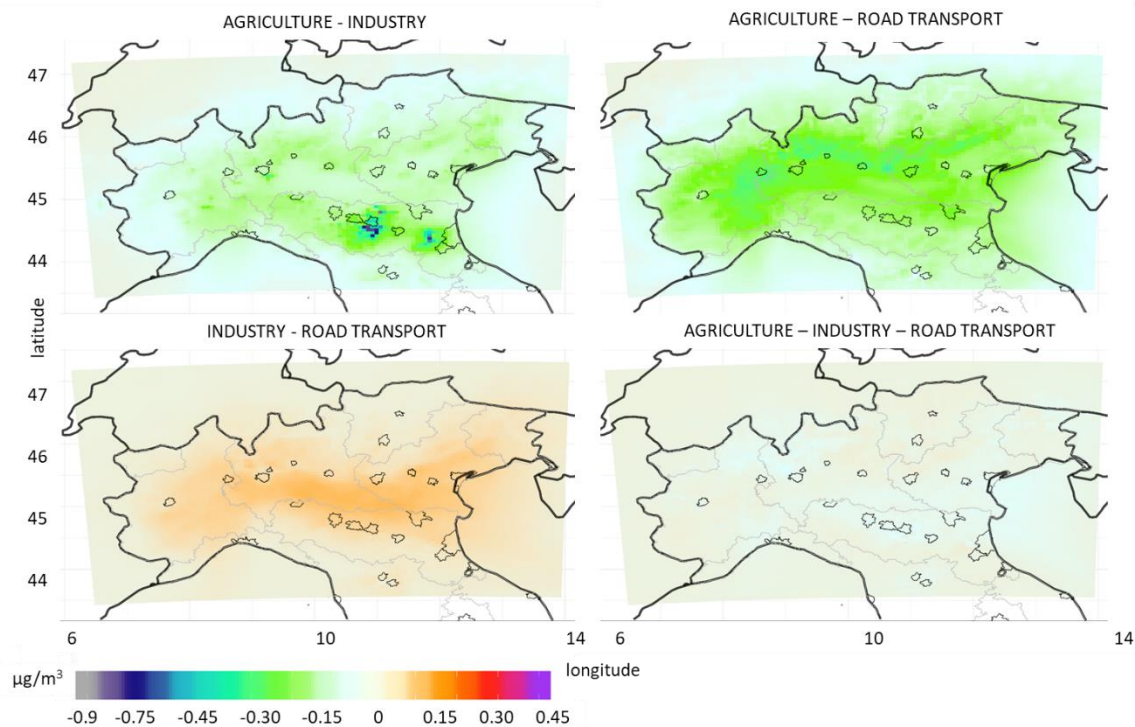

Figure S8 Map of the binary and ternary interaction terms of the PM_{10} factor decomposition for AGR, IND and TRA in the CAMx 50% scenarios.

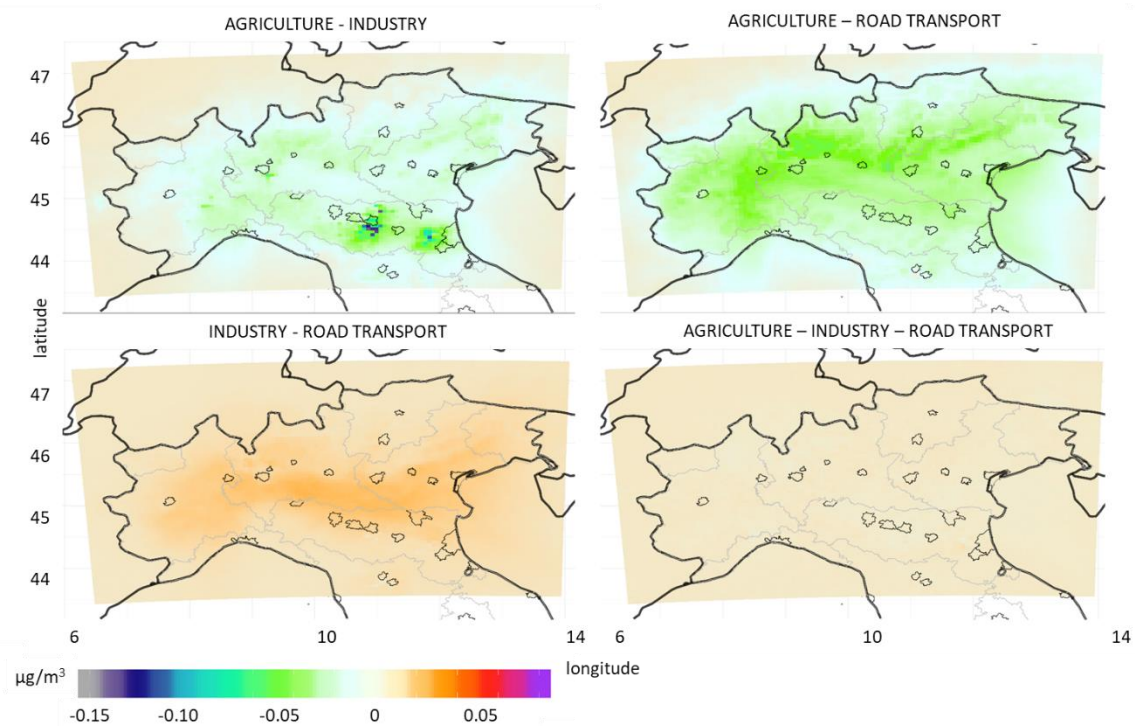

Figure S9 Map of the binary and ternary interaction terms of the PM_{10} factor decomposition for AGR, IND and TRA in the CAMx 20% scenarios.

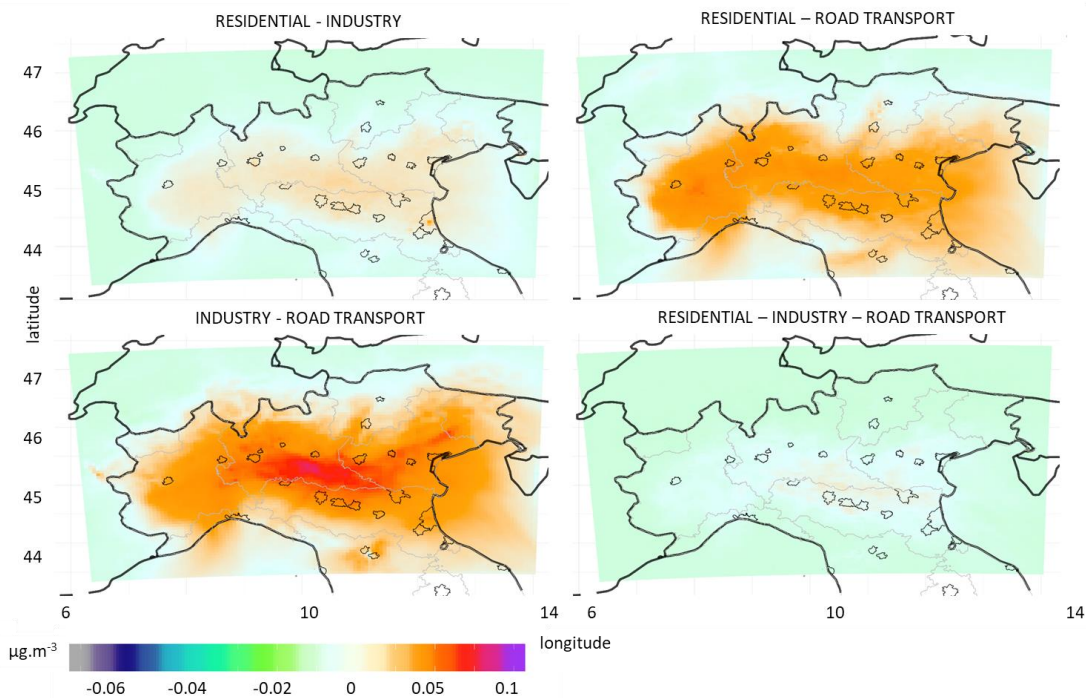

Figure S10 Map of the binary and ternary interaction terms of the PM₁₀ factor decomposition for RES, IND and TRA in the FARM 50% scenarios.

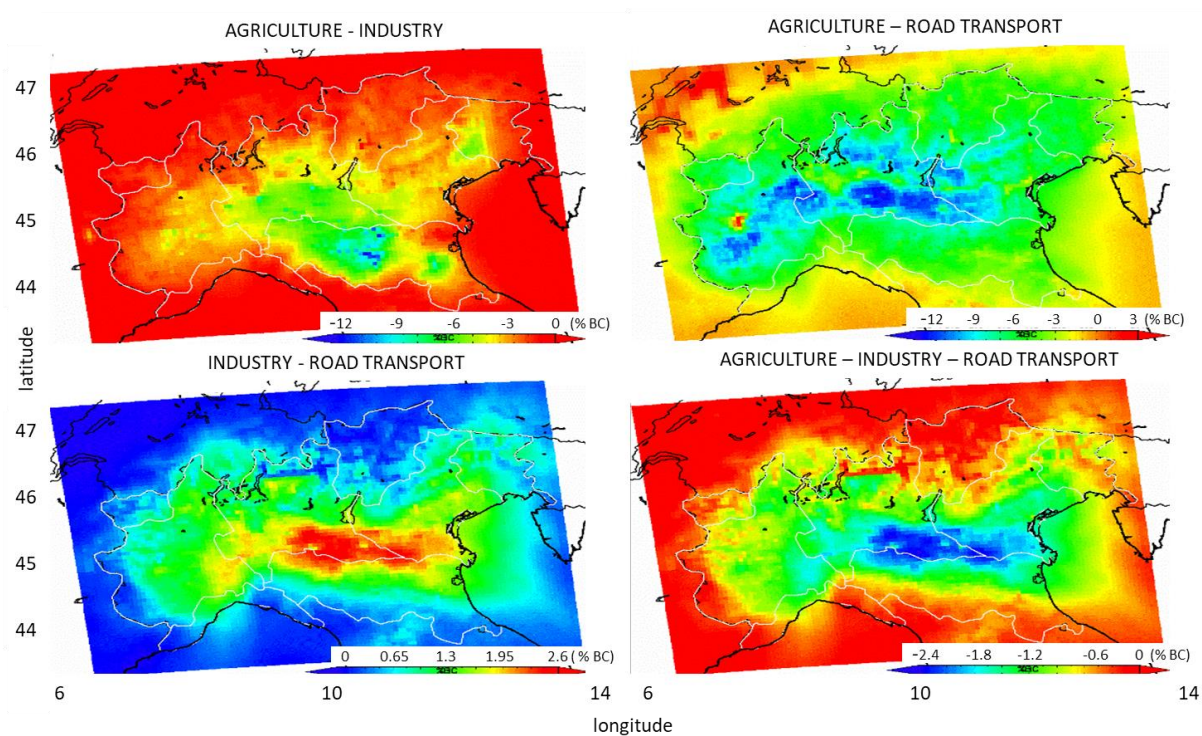

Figure S11 Map of the binary and ternary interaction terms of the PM₁₀ factor decomposition for AGR, IND and TRA in the CAMx 100% scenarios expressed as percentage of the base case.

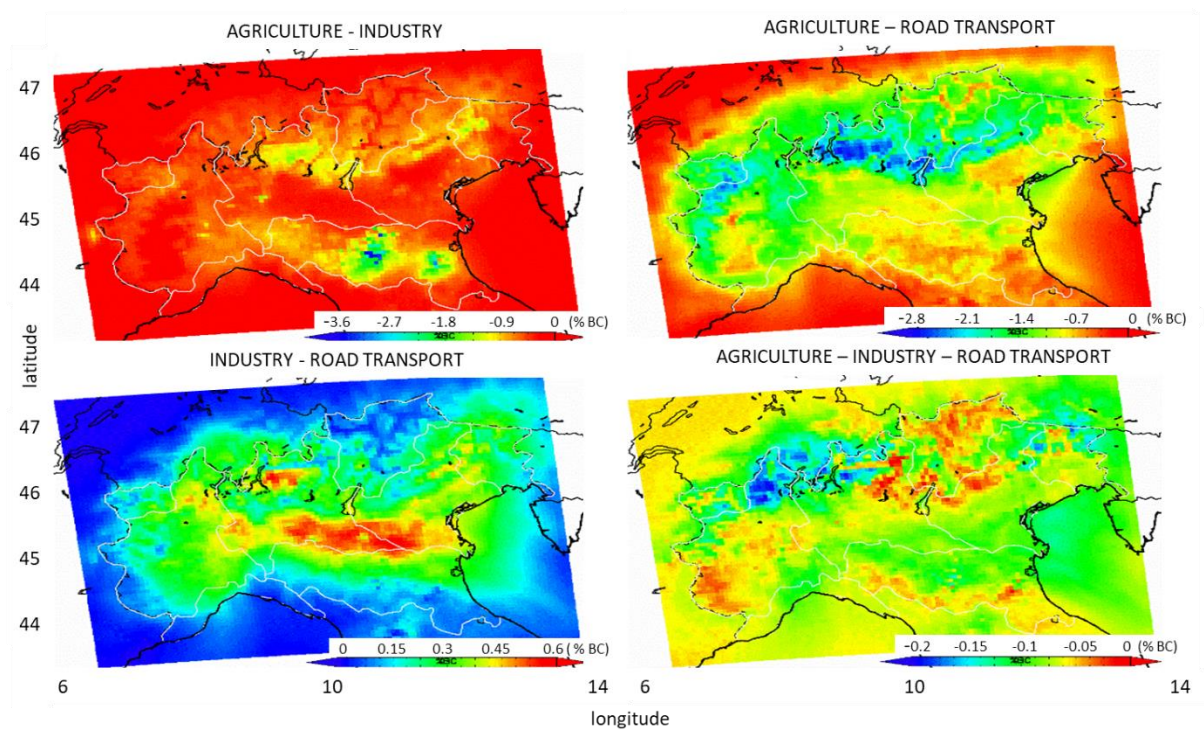

Figure S12 Map of the binary and ternary interaction terms of the PM₁₀ factor decomposition for AGR, IND and TRA in the CAMx 50% scenarios expressed as percentage of the base case.
