

Interactive comment on “An exploratory performance assessment of the CHIMERE model (version 2017r4) for the northwestern Iberian Peninsula and the summer season” by Swen Brands et al.

Anonymous Referee #2

Received and published: 19 April 2020

As a reviewer I already examined and commented a previous version of the manuscript, which was initially submitted to ACP. The paper has been in accordance with editor and reviewers transferred to GMD, since it has a quite technical focus. With this newly submitted manuscript the authors addressed all critical points raised by me, I am fully satisfied with their response. The manuscript has considerably improved. The study has been extended by using additionally a more recent emission data set from EMEP, what gave the comparison with observations on a sound basis. Also at several passages text segments have been added which help the reader to better grasp how the

study was actually performed. It would have been interesting to also explore the applied pre-set functions used for the time disaggregation of the annual emissions for study region. This might be a task for a follow up analysis. There still are a few typos in manuscript and some numbers in the figure may be too small to be readable. Thus, standard editorial work is need. In conclusion, I recommend this manuscript for publication in GMD.
