Received and published: 6 May 2020

Dear Campforts and co-authors,

Both referees have posted broad and positive comments, and therefore, I will not be soliciting input from a third referee. The open discussion period will remain open until 01 June, and I encourage you to submit responses to referee comments before then. This will also allow you the possibility of having some back-and-forth with the referees, and if your responses are satisfactory, allow me to give you an earlier response regarding whether we will invite you to submit a revised version of your manuscript following your responses to referee comments.

Best wishes,
Andy Wickert
