We thank the reviewer for the comments.

We address in our reply all the comments, and in particular the one related to the differences between the 2 considered model set-up, with validation against observations.

In particular, please find attached: - a 'reply to reviewer's comments' document - a 'supplementary material' document, with base case validation results for the 2 model set-up - a html, with further analysis performed on the data, and used to further explore differences in input data for the 2 model set-up
