We would like to thank the editors and all reviewers for their contribution to this review process. Responses follow.

Report 3:

1) updated according to (2)
2) updated
3) it is unclear what change the reviewer is asking for here (filesystem operations are already named and filesystem operations are a particular type of I/O), so we have not made a change
4) updated
5) replaced "section" with "statement", as the data availability statement is not a numbered section
6) updated

Report 1 / Topical Editor comments:

The Zenodo references have been updated as best we can with full author names. There are still some usernames remaining for which we either cannot determine the author name (e.g. "John" from Amazon Web Services), or for which the author listed on the DOI is a software tool (pyup.io bot).

The Copernicus bibtex style file (bst) does not support the formatting requested for Zenodo entries, so we have updated our bst to reflect the requested output. There does not seem to be a way to upload this changed file in the upload form. If we cannot upload this file and you require these changes, please let us know and we can send them separately.
