

Dear Editor,

We thank you for your helpful inputs to further improve our Figure 2. We heeded your advice and changed the colour coding of the module titles, such that also people who have problems to distinguish between red and green can read the figure. Moreover, we added also the titles in the “Inversion module” to further improve its readability. Finally, as we reduced the white space of the figure, we felt that we should also hint at the outputs of the modules to retain the most important information in one view.

Further, we changed the symbol for the Odds ratio from  $O$  to  $R$ . It should now not conflict with other symbols anymore.

In addition to the revised Figure 2, we also changed the coloured cells in Table 1. We were pointed out by the technical check staff that this is impossible. So we decided to highlight the target parameters in a bold font.

There table numbering in Appendix B started from B2, which we corrected.

Kind regards,

Alessandro Lechmann
