Responses to comments from editors

Dear editors,

To associate editor:
Thanks for your time in reading and processing our paper. We appreciate all your valuable comments and suggestions, which are helpful to improve our manuscript. We have added the discussions corresponding to #4 in the previous round of reviewing in our manuscript to demonstrate the boundary effects that may introduce instabilities to the modeling results and how to mitigate the edge artifacts in the CNN. Let's discuss more if some of our explanations in the responses are not clear to you.

Thanks!
