

Dear editor,

- *Please ensure that the colour schemes used in your maps and charts allow readers with colour vision deficiencies to correctly interpret your findings. Please check your figure 6 and the supplement figures using the Coblis Color Blindness Simulator and revise the colour schemes accordingly.*

Checked.

- *Further, if you applied changes to the supplement PDF, a tracked changes file is mandatory. This is why I kindly ask you to include the tracked-changes of your manuscript together with the tracked-changes of your supplement in one PDF. Considering the size of your supplement, I would suggest to only include the figures that actually have changed.*

No changes were applied to the supplement.
