RE: Improving nitrogen cycling in a land surface model (CLM5) to quantify soil N_2O, NO and NH_3 emissions from enhanced rock weathering with croplands

Dear Chris,

Thank you once more for managing the review of our manuscript. We have implemented the technical revisions and addressed the typo in L223, replaced 'trail' into 'trial' as well as rephrased 'IPCC 2021' to 'IPCC Sixth Assessment Report (AR6)', as suggested.

Your time and guidance throughout this process are appreciated.

Sincerely,

Dr Maria Val Martin
